

KSM PROJECT

Human Environment Studies

Seabridge is conducting studies to understand the current human environment near the proposed KSM Project. This will help to assess potential project effects on regional residents.

Socio-Economics

Socio-economic studies have identified the social, economic, heritage, and health components of regional and local communities that could potentially be affected by the proposed project.

Archaeology

Multiple archaeological sites were found in the proposed KSM Project area. These sites are now protected.

Traditional Knowledge

Local Aboriginals' traditional knowledge (TK) provides valuable information important to a comprehensive environmental assessment process.

- The KSM Project Team recognizes the sensitive nature of TK and seeks to work collaboratively with Aboriginal knowledge holders in a mutually beneficial manner.

Country Foods

This study evaluates the quality of foods potentially harvested in the proposed project area.

Land and Resource Use

Land and resource use studies identify land users and owners and their activities in the proposed KSM Project area and surroundings. Potential project effects on existing land use are determined, and appropriate mitigations are developed. Potential land users and owners include:

- Aboriginal peoples
- Hunters, trappers and fishers
- Guide outfitters
- Tourism and recreation operators
- Private property owners
- Users of parks and protected areas
- Mining, oil and gas tenure holders
- Forestry tenure holders
